

# Acronis® True Image Small Business Edition

## Acronis® True Image for Microsoft Windows Small Business Server

For many years reliable disaster recovery was a luxury only the largest companies could afford. The cost reduction of hardware and disk space now allows any company to take advantage of this necessary technology.

Acronis True Image for Microsoft SBS is designed to provide all of the capabilities offered to large enterprises, but purpose-built to meet the needs of small business. It's a backup and restore solution for companies with fewer than 100 employees.

Whether you're a three person accounting firm or a 100 person manufacturing plant, the requirement to recover from a server or workstation disaster is the same: protect against data and system loss. If asked, employees would list their computer as the most needed accessory in the office. As the one responsible for making sure business systems are available, it is critical to remember *it's not how long it takes to backup, but how long it takes to recover, that matters.*

For example, as Gartner Inc., a leading market research and consulting firm estimated, two out of five companies that experience a disaster will go out of business within five years as a result of the event.

If a server goes down, for even an hour, it can bring your company to a screeching halt. With its emphasis on recovery, Acronis True Image for Microsoft SBS will allow anyone in the company to initiate a recovery with minimum knowledge of the system.

Acronis True Image for Microsoft SBS is a complete backup/restore and disaster recovery solution that is based on the award winning Acronis True Image product line. Combined with Microsoft's Small Business Server, it is designed to provide all of the power of a robust disaster recovery solution in an affordable package. We've even included the ability to restore to dissimilar hardware.

With critical features like full, incremental and differential backup, this powerful product will take a complete server or workstation disk image including operating system, application, settings, and data files. It has a wizard driven interface that allows non-IT staff to perform a backup and system recovery with little or no training.

And should you need to recover your archived image to a different server platform, using Acronis Universal Restore makes it easy to be running again in minutes, not hours or days.

The US Bureau of Labor Statistics claims that 93% of all companies that experience “significant data loss” are out of business within five years.

### Benefits:

#### Simple

Wizard-driven backup scheduling will guide users through every step

#### Fast

One-button recovery to get systems back online in minutes

#### Secure

Password protection and image encryption to protect sensitive data

#### Reliable

Based on award-winning Acronis True Image disk-imaging technology that is protecting more than 2 million systems

#### Affordable

Enterprise-level protection at a price any small business can afford

Features
<b>System Protection</b>
Full disk imaging including differential and incremental backups
File-based backups
VMware Consolidated Backup Support
Exclude file types from file-based backups
Compression
Password protection for Acronis Secure Zone®
Industry-standard AES archive encryption
Multi-volume snapshots
Event-driven backup options
Change System Identification (SID) when restoring an image
<b>Recovery</b>
Integration with Acronis Recovery for MSSQL Server
Create bootable media using WinPE and BartPE
Bare-metal restore
Acronis Universal Restore (restore to different hardware) <sup>1</sup>
Mount images in read/write mode
Acronis Active Restore (priority application restore)
Acronis Startup Manager (boot recovery environment with F11 key)
Supports VMDK and VHD file formats for instant virtualization
Dynamic disks support
Automatic reboot after restore option
<sup>1</sup> Acronis Universal Restore is separately licensed.

Features (continued)
<b>Administration</b>
Image consolidation
Backup scheduling
Notifications (email, pop-up, SNMP)
Logging (Acronis log, Windows Event Log)
Wake-On-LAN support
Backup multiple increments throughout a single day
Schedule periodic backup validation
Clone existing schedule
<b>Remote Administration</b>
Central management console
Manage backup operations for groups of machines
Remote installation and configuration
Remote restore
PXE support
<b>User Interface</b>
Both wizard-driven GUI and command-line interface
<b>Active Protection</b>
Hot imaging/backups
Microsoft Volume Shadow Copy Service (VSS) Support
CPU/network bandwidth/disk write speed throttling

## Storage Media

The following storage locations are supported:

- Networked Storage Devices (SAN, NAS)
- FTP servers
- CD-R/RW, DVD-R/RW, DVD+R/RW
- Blu-ray Support
- ZIP®, JAZ®, REV® and other removable media
- Tape Support
- PATA(IDE), SATA, SCSI, SAS
- IEEE1394 (FireWire)
- USB 1.0/2.0 drives
- PC Card storage devices

## Supported Operating Systems

- Windows Small Business Server 2003
- Windows Small Business Server 2008

## Awards

Acronis True Image received TechEd 2007 Attendee's Pick Award for Business Application by Penton Media

Storage Products Guide has named Acronis Inc. one of its Storage "Hot Companies" winners for 2007.

Acronis True Image received the "Best of the Best" Award from Redmond Magazine
